

# WESTERN FORBS: BIOLOGY, ECOLOGY, AND USE IN RESTORATION

Distribution

Habitat

Description

Reproduction

Ecology

## BIOLOGY & ECOLOGY

*Western Forbs: Biology, Ecology, and Use in Restoration*, is a growing online book providing information on native forb ecology and guidelines to support their inclusion in revegetation projects. It is funded primarily by the BLM with additional support from USFS Rocky Mountain Research Station and the Great Basin Fire Science Exchange.

Over the past 20 years, considerable research has gone into understanding the ecology of western forb species and establishing methods for their use in restoration. However, this information is broadly scattered through the literature and has yet to be synthesized comprehensively.

Gathering and synthesizing published data together with unpublished protocols and knowledge gained through practical experience is necessary for seed collectors, growers, practitioners, and land managers to increase the supply and use of appropriate seed sources of native forbs for restoration of sagebrush steppe and other western ecosystems.

## REVEGETATION & RESTORATION

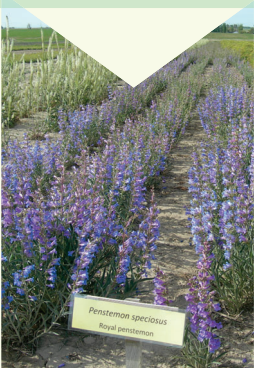

Seed Sourcing

Seed Collecting

Seed Production

Nursery Production

Wildland Revegetation
